

# Proposed 2021 GFDL T-SHiELD Near Real-Time System

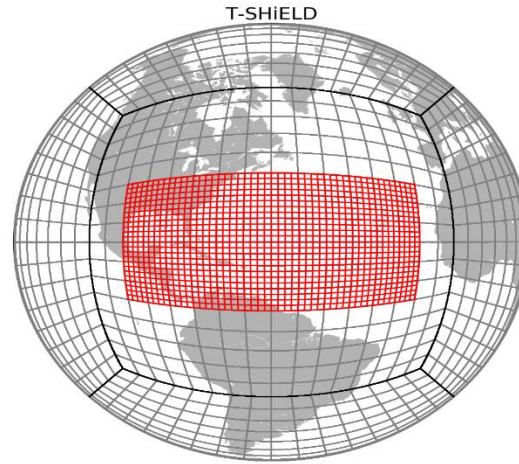

Morris Bender, Kun Gao, Matthew Morin, Lucas Harris,  
Timothy Marchok

HAFS Coordination Meeting  
May 26<sup>th</sup>, 2021

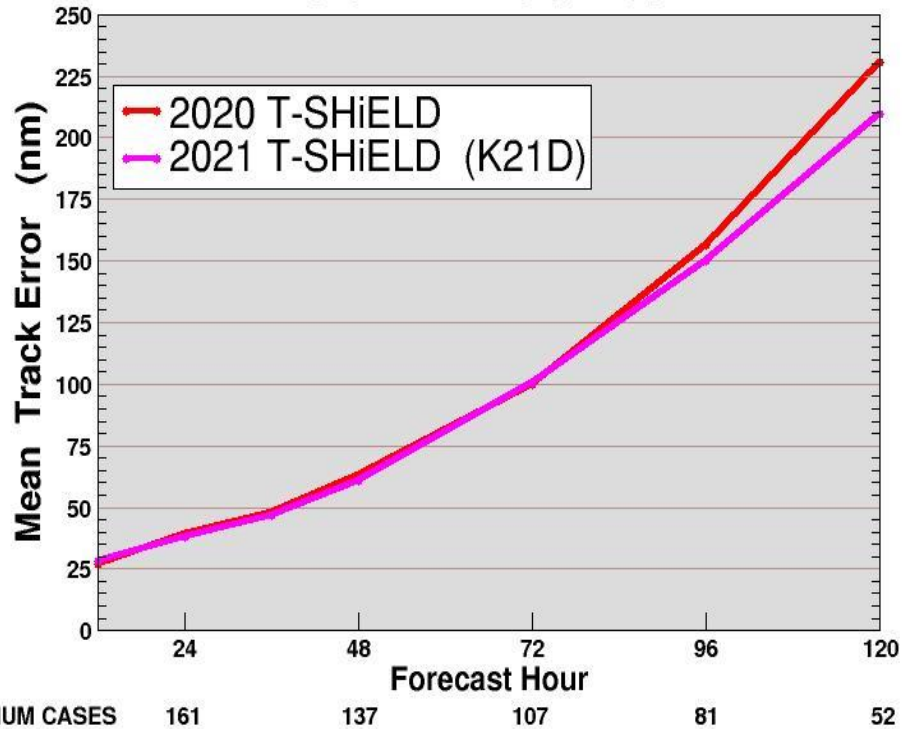

# Key features of Upgraded 2021 T-SHiELD

- YSU PBL Replaced with EDMF-TKE Scheme (100m mixing length cap).
- New Cd and Ch (Based on HWRF surface exchange coefficients).
- Improved Cloud Ice/Radiation Interaction.
- Refined the entrainment and detrainment parameters in the shallow convection to reduce low-level cloud bias **(K21D)** . Also tested with parallel version **(K21B)** with the previous shallow convection settings.
- 2021 T-SHiELD being configured for 75 vertical levels in nested region.

## 2020 Track Error (nm)

TKE-EDMF SIMULATIONS WITH T-SHIELD  
2020 ATLANTIC SEASON

## 2020 East-West Track Bias (nm)

TKE-EDMF SIMULATIONS WITH T-SHIELD  
2020 ATLANTIC SEASON

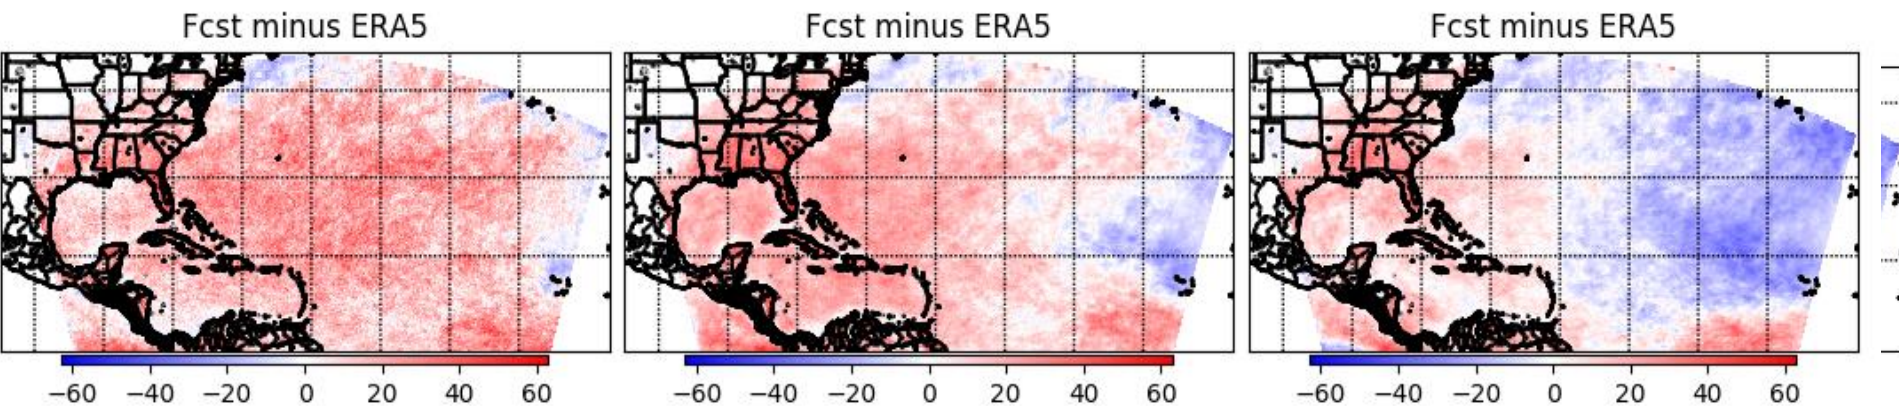

**Large East Track Bias for T-SHIELD that persisted throughout the 2020 Atlantic Season significantly reduced in 2021 version of T-SHIELD with modified shallow convection.**

# 5 Day Mean Low-Level Cloud Cover

(August 20<sup>th</sup>, 2020 – September 20<sup>th</sup>, 2020)

## OBSERVED

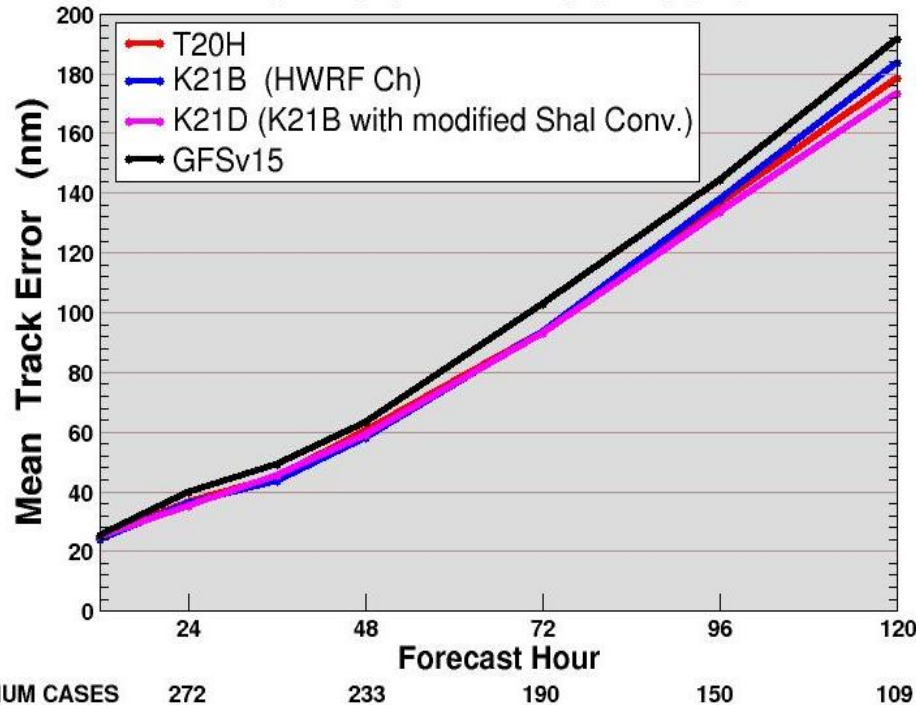

**2021 T-SHiELD (ATCF-ID: “K21B/K21D”) being presently evaluated on selected cases from past 4 hurricane seasons for a more robust sample of 300+ cases**

- **2020 (0z and 12z): All storms from AL09 through AL29**
- **2019 (0z and 12z): Dorian, Erin, Fernand, Gabrielle, Humberto, Jerry, Imelda, Karen, Lorenzo)**
- **2018 (September 1<sup>st</sup>-16<sup>th</sup>, 0z only) : Florence, Gordon, Helene, Isaac, Joyce**
- **2017 (September 1<sup>st</sup>- 29<sup>th</sup>, 0z only) : Irma, Jose, Katia, Lee, Maria**

# Track Verifications and East-West Track Bias Multi-Season Evaluation

TKE-EDMF SIMULATIONS WITH T-SHIELD  
2017-2020 ATLANTIC SEASONS

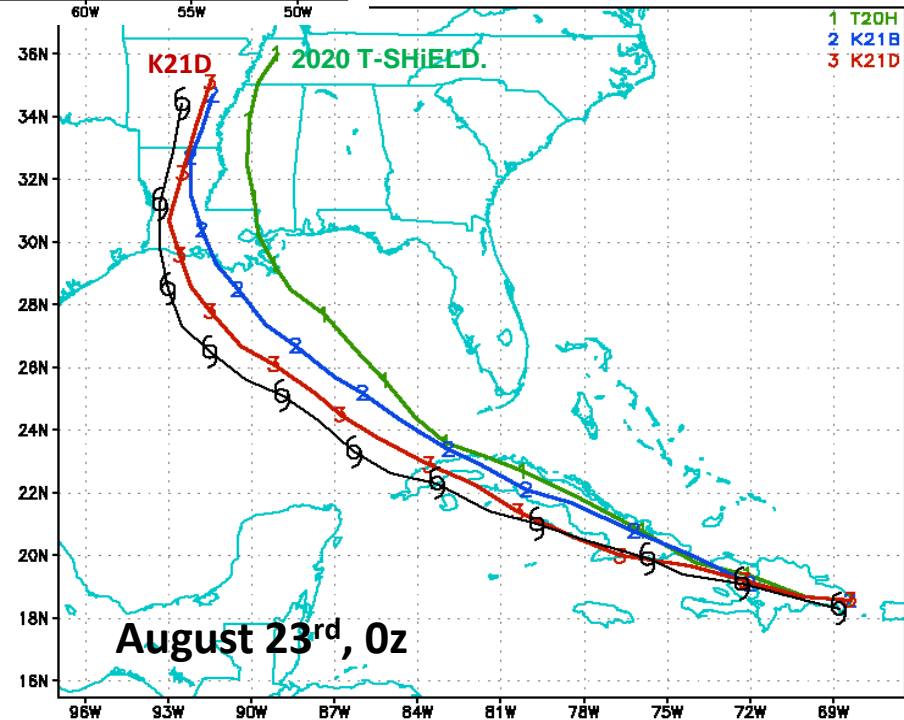

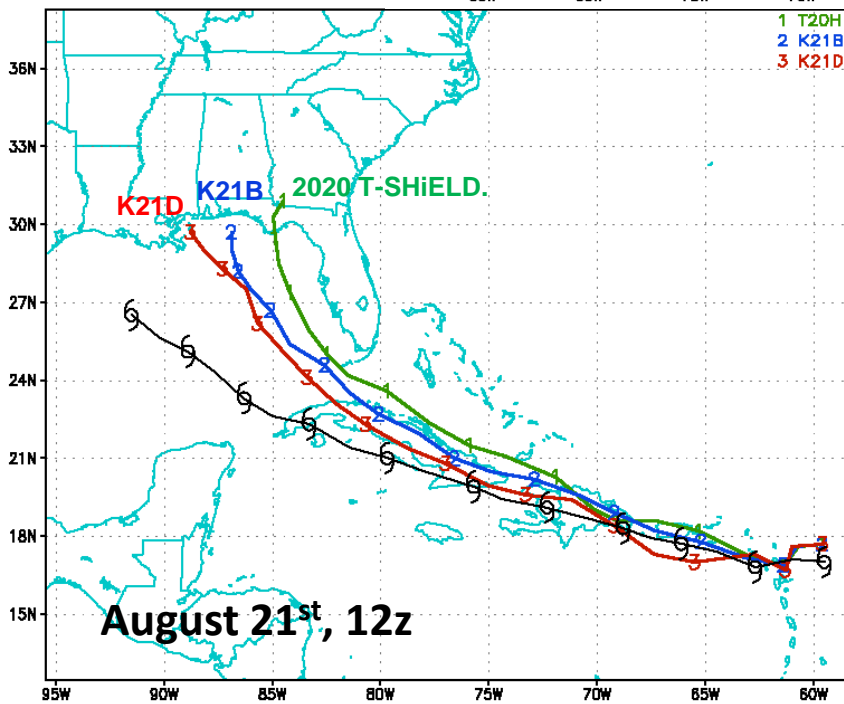

TKE-EDMF SIMULATIONS WITH T-SHIELD  
2017-2020 ATLANTIC SEASONS

At 3-5 Days, Track Error of  
2021 T-SHIELD with modified Shal.  
Conv. was reduced 3% compared to  
2020 version & 10% compared to GFS

East-West Positive Track Bias  
in Multi-Season evaluation is  
greatly reduced in 2021  
T-SHIELD with modified Shal.  
Conv.

**Reduced east bias for K21D in Hurricane Laura in 2021 T-SHiELD**

# Intensity Errors and Bias

Mostly neutral impact on intensity errors for 2021 T-SHiELD

# Summary

- **2021 T-SHiELD with modified entrainment/detrainment in shallow convection scheme, significantly reduced excessive cloudiness found in 2020 T-SHiELD at the lower model levels.**
- **2021 T-SHiELD demonstrated much reduced positive east-west track bias with modified shallow convection. (This east track bias was very significant in 2020.)**
- **2021 T-SHiELD demonstrated small improvement in overall track skill (~3%) over a multi-season evaluation but 10% reduction in track error compared to the Version 15 GFS. Reduction in track error was larger for 2020 season (~10% at day 5).**
- **2021 T-SHiELD had mostly a neutral impact on Intensity Skill. However 2020 version was already producing very skillful intensity forecasts.**
